PROFESSIONAL SUMMARY

Junior iOS Developer with **1+ years of hands-on experience** designing, building, and maintaining production iOS applications using **Swift, UIKit, SwiftUI, MVVM, REST APIs, Firebase**, and modern iOS development practices. Skilled in offline-first application design, push notifications, payment gateway integration, localization, and App Store deployment. Published **2 apps** on the Apple App Store and contributed **20+ modules and features** across production applications. Passionate about writing scalable, reusable, and maintainable code that follows clean architecture principles.

TECHNICAL SKILLS

Programming: Swift 5+, Objective-C, JSON, XML

iOS: UIKit, SwiftUI, Foundation, Core Data, Core Animation, Core Graphics, Core Location, AVFoundation, UserNotifications, Combine

Architecture: MVVM, MVC, Repository Pattern, Singleton, Delegate Pattern, SOLID Principles

Networking: REST APIs, URLSession, Codable, JSON Parsing, Postman

Firebase & Notifications: Firebase Authentication, Cloud Firestore, Realtime Database, Firebase Cloud Messaging (FCM), Firebase Crashlytics, Apple Push Notification Service (APNs)

Storage: Core Data, SQLite, UserDefaults, AppStorage, Keychain Services

Concurrency: Grand Central Dispatch (GCD), DispatchQueue, Async/Await

UI Development: Auto Layout, Storyboards, XIB, Programmatic UI, Responsive UI, Reusable UI Components

Testing: XCTest, Unit Testing, UI Testing

Package Management: Swift Package Manager (SPM)

CI/CD: Fastlane, Xcode Cloud, GitHub Actions, Bitrise, Jenkins

Payment Integration: Razorpay Payment Gateway, Payment Verification, Payment Status Handling

Version Control & Tools: Git, GitHub, Bitbucket, Sourcetree, Xcode, VS Code, Jira, Figma, Canva

App Distribution: TestFlight, App Store Connect, Certificates, Provisioning Profiles

Methodologies: Agile, Scrum

Additional: Localization, Offline-first Architecture, Background Synchronization, Network Reachability Monitoring, PDF Generation

EXPERIENCE

Junior iOS Developer

Dec 2025 – Present

TMedia Business Solution Pvt Ltd

Team of 2

- Built and maintained **20+ modules, features, and screens** across enterprise iOS applications using **Swift, UIKit, SwiftUI**, and **MVVM** architecture, as part of a 2-person development team.
- Built **5+ reusable UI components**, responsive layouts, and scalable application architecture across multiple product modules.
- Integrated **30+ REST API endpoints** using **URLSession** and **Codable** for reliable client-server communication.
- Improved application stability by reducing production crashes by **over 50%** through debugging, crash analysis, and code optimization.
- Debugged UI, networking, and business logic issues using the **Xcode Debugger** and **Instruments**, reducing production defects by approximately **75%**.
- Collaborated with cross-functional teams using **Git, Bitbucket, Sourcetree**, and **Jira**, following **Agile/Scrum** methodology to achieve **100% on-time** feature releases.

iOS Developer Intern

May 2025 – Nov 2025

ImpeedCraft

Bangalore, India — Team of 4

- Developed iOS applications using **Swift, UIKit, SwiftUI, MVC**, and **MVVM** architecture as part of a 4-person team.
- Designed **10+ reusable UI screens** using **Auto Layout, Storyboards**, and Programmatic UI.
- Implemented **15+ REST API endpoints, Firebase Authentication, Crashlytics**, and **Realtime Database** integration.
- Established local data persistence with **Core Data** and **UserDefaults**, and managed **2 TestFlight** builds through to **App Store** deployment, certificates, and provisioning profiles.

PROJECTS

MazdoorBook (apps.apple.com/mazdoorbook)

SwiftUI, MVVM, REST APIs, Firebase, Razorpay

- Architected a production-ready workforce management iOS application from scratch using **SwiftUI** and **MVVM** architecture, now live on the App Store.
- Structured modular architecture across **7 core modules** – Authentication, Attendance, Employees, Payments, Profile, Home, and Super Admin.
- Built a reusable networking layer using **APIService**, **APIManager**, **APIEndpoint**, **Codable** models, and **Repository Pattern** for scalable API integration.
- Implemented secure authentication, session management, **Keychain** storage, **AppRouter**, **AppState**, reusable UI components, and **NavigationStack**-based navigation.
- Integrated the **Razorpay Payment Gateway** with payment verification, **PDF** receipt generation, receipt sharing, and payment status handling.
- Provided multilingual **localization** across **4 languages** (English, Hindi, Kannada, Marathi), **Push Notifications**, **Firebase Core**, **Firebase Crashlytics**, **UserDefaults**, and **AppStorage**.

NexusChat

SwiftUI, MVVM, Repository Pattern, REST APIs

Tested with 20+ Users

- Engineered a scalable real-time chat application from scratch using **SwiftUI** and **MVVM** architecture, enabling live one-to-one and group communication with real-time messaging in **under 1 second**.
- Shipped **8 core features**, including one-to-one chat, group chat, pinned messages, message forwarding, user mentions, authentication, profile management, and a notice board.
- Validated real-time performance and stability through testing with **20+ users**.
- Organized modular architecture using **Repository Pattern**, Service Layer, reusable UI components, **AppRouter**, and **AppState**.
- Consumed **REST APIs** using **Codable** models within a scalable networking architecture with clean separation of concerns.
- Configured and maintained **CI/CD** pipelines using **Fastlane** and **GitHub Actions** to automate build and deployment workflows.

Edification

UIKit, REST APIs, Enterprise Application

Team of 2

- Contributed to a large-scale enterprise school management application built with **UIKit**, as part of a 2-person development team.
- Delivered **REST API** integration, reusable UI components, **localization** support, and **offline-first** architecture.
- Optimized **background synchronization**, **network reachability monitoring**, and production-level bug fixing.
- Refactored **11 modules**, including Homework, Attendance, Examination, Student Progress, Digital Library, Notifications, Lesson Planning, Transport, Sports, Health, and Profile.
- Built a face-recognition-based attendance feature achieving **over 95% accuracy** during testing, enabling automated, contactless student attendance marking.
- Partnered with team members following **Agile** methodology while maintaining production-quality code.
- Integrated third-party libraries using **Swift Package Manager (SPM)** for efficient dependency management.

Vastu-Cite App (apps.apple.com/vastu-cite)

SwiftUI, MVVM, Localization

250+ Downloads

- Built and shipped a Vastu calculation application on the Apple App Store using **SwiftUI**, reaching **250+ downloads**.
- Developed reusable UI components with responsive layouts and clean navigation flow.
- Added multilingual **localization** along with **UserDefaults** and **AppStorage** for local persistence.
- Designed intuitive calculation screens with production-ready architecture and clean user experience.

EDUCATION

S G Balekundri Institute of Technology

Bachelor of Engineering - Computer Science and Engineering

Belagavi

2021 – 2025 — CGPA: 8.4

CERTIFICATIONS

NPTEL - Programming in Java

ACHIEVEMENTS

Launched **2 iOS applications** on the Apple App Store.

Shipped multiple production-ready iOS applications from scratch using **SwiftUI** and **UIKit**.
